

American Dynamics SpeedDome Ultra 8 Now Compatible with Pivotal Vision's ScadaCam iAlert Software

Minneapolis, MN – July 24, 2009—Pivotal Vision today announced that customers can now use American Dynamics' high quality SpeedDome Ultra 8 Dome Cameras in conjunction with Pivotal Vision's ScadaCam Intelligent Surveillance System using the RS-422 Sensormatic protocol. This combination of two market leading products gives critical infrastructure companies another high quality option for efficiently meeting the increasing need for automated security surveillance monitoring.

The SpeedDome Ultra 8 offers two powerful series (22x and 35x optical zoom) that lets you choose the dome that is right for any application. The 35x camera also supports Wide Dynamic Range (WDR), which improves video performance under simultaneous indoor and outdoor lighting conditions, such as looking through an open door or window. In addition, the two series supports advanced features, such as 12X digital zoom (up to 420X total zoom) for the 35x and 11X digital zoom (up to 242X total) for the 22x. The combination of Pivotal Vision's ScadaCam Intelligent Surveillance System and American Dynamics SpeedDome Ultra 8 Dome cameras creates a premium, fully automated intelligent surveillance system.

"The AD Ultra 8's quality and accuracy is great addition to ScadaCam's industry leading autonomous pan-tilt-zoom (PTZ) camera tracking and intelligent surveillance platform," Loren Taylor, chief executive officer of Pivotal Vision. "Our customers will appreciate the high standard of engineering they bring."

The ScadaCam Intelligent Surveillance System is now compatible with more than 22 pan-tilt-zoom (PTZ) cameras so that customers can build the system that best fits their needs.

About Pivotal Vision

Pivotal Vision is a leader in intelligent surveillance technologies for security and operations in critical infrastructure industries. Pivotal Vision develops and markets its ScadaCam Intelligent Surveillance System. After 8 years of development in the field, it has become the most technically advanced monitoring software available.
