## **Pivotal Vision®'s Multi-purpose Automated Surveillance System is a Smart Grid Solution**

### ***Pivotal Vision participates in prototype smart grid substation automation deployment***

Minneapolis, MN – August 4, 2008 – Pivotal Vision's ScadaCam® Intelligent Surveillance System has been deployed as part of Xcel Energy's® prototype smart grid substation. Security monitoring of the site is performed on the same IP-based platform as the thermal monitoring of the station's transformers. Xcel Energy will be testing and assessing the technology for potential future applications, such as their Smart Grid City initiative.

ScadaCam enables critical infrastructure businesses to meet, cost effectively, the increasing need for security surveillance by installing automation in place of adding personnel. "The investment in a fully automated common platform for security and operations can provide benefits to utility security, operations, maintenance and asset management functions," said Jerry Larsen, COO of Pivotal Vision.

### **About Pivotal Vision™**

Pivotal Vision is a leader in intelligent surveillance technologies for security and operations in critical infrastructure industries. Pivotal Vision develops and markets the established ScadaCam Intelligent Surveillance Technologies, the most technically advanced monitoring software available.
